Honey production

The image features a large, vertical honeycomb structure on the left, with a thick layer of golden honey dripping from its base. To the right, a glass jar is partially visible, filled with honey and sealed with a natural, woven lid. A wooden honey dipper with a handle and a series of ridges is positioned in the foreground, resting on a pool of honey. The background is a plain, light color, emphasizing the natural elements of the scene.

Honey production

<Truth Honey Company> has also started its activity in production and packaging of pharmaceutical as well as herbal honeys. The medicinal properties of natural honey is very important to this company. "Truth" gathers the finest honeys from different regions of Iran such as Fars, Kurdistan, Kermanshah, Kohgiluyeh Va Boyer-Ahmad provinces and offers them to consumers in the best possible conditions and forms and free from any damage on food packaging.

All products of this company are analyzed before packaging in food control laboratory, they can be packaged in the best form just in the case that they had passed all the Standard factors.

Types of honey

Honey has its own special properties according to production region and the flowers that honey bee have eaten. However, due to method of offering to market, honey is classified as follows:

1. Liquid honey (honey extracted from Shan)
Using centrifugal force and gravity or by filtering, this kind of honey is separated from Shan.

2. Waxed honey (Shan honey)
This honey exists in Shan houses. This type of honey can be seen in several forms such as:
- Piece Shan honey is produced in square cube, small cube or circular shapes.
- Individual piece Shan honey is produced in one-quarter size of ordinary Piece Shan honey.
- Large Shan honey is produced in narrow width frames and thin Shan base.
- Shan honey mixed with liquid honey contains cut Shan honey that is placed in a container and the remained space filled by liquid honey.

3. Royal jelly

Royal jelly is a thick material in yellow or cream color that is secreted from HYPOPHARINGEAL gland of young worker bees and is the only food

of honey bee queen. When this jelly is mixed with honey, after a while, honey will be very diluted. Royal jelly flavor is sour and astringent.

4. Honey bee pollen

Pollen is male flower seed that exists at the flag flower end and is the only factor to fertilize the plant. Honey bee stores this pollen inside its legs bags and takes it into the hive to feed itself and its babies.

Dates production

Truth offers the finest dates to customers by launching a complete line of dates packaging includes disinfection division, washing division and drying division.

Olive oil

In recent years, development of olive orchards has risen. Truth Company also with the goal of producing fine olive oil has established a plant. Then purchasing and installing advanced machineries to draw olive oil. This plant has been established in Tarom region. This region produces the most olive in the country. Now, this plant is working with two synchronous lines of drawing oil. Production capacity is more than a thousand tons of olive oil. With the purpose of creating diversity in olive oil products, a clean-up and refinement line of olive oil has been installed and launched, and odorless olive oil added to company production basket.
